For Today

YOUNG RESEARCH LEADERS GROUP WORKSHOP
TRANSPORT AND TRANSFER OF ANGULAR MOMENTUM: MAGNONS, CHIRAL PHONONS AND BEYOND
Workshop June 9th - 11th, 2026
Wasem Monastery, Ingelheim, Germany
SPICE
ORGANIZERS:
Verena Brehm (TU/e)
Pieter Gunnink (JGU)
Michaela Lammel (University of Konstanz)
Poster design: SuperNovaStudios, NL
INVITED SPEAKERS:
Kyongmo An (CBNU)
Silvia Damerio (ICMAB)
Vivek Dwij (Radboud University)
Laëtitia Farinacci (University of Würzburg)
Joren Harms (University of Konstanz)
Rhea Hoyer (University of Münster)
Lisa-Marie Kern (MIT)
Eric Kleinhebers (UCLA)
Miina Leiviskä (FZU)
Aleksandra Lopion (University of Münster)
Samuel Mañas Valero (UV)
Léo Mangeolle (TUM)
Hugo Merbouche (CEA)
Lorena Niggli (University of Basel)
Paul Nöel (IPCMS)
Mike Pols (ETH Zürich)
Giacomo Sala (University of Geneva)
Richard Schlitz (University of Konstanz)
Sanchar Sharma (UAM)
Even Thingstad (University of Basel)
Markus Weissenhofer (UU)
Na Wu (MPSD)
The Spin Phenomena Interdisciplinary Center aims to bring together scientists of varying seniority and disciplines in spin related research to break down scientific barriers and foster emergent areas of research.

Optically Detected Magnetic Resonance (ODMR)

Quantum sensing with color centers

Optically Detected Magnetic Resonance (ODMR)

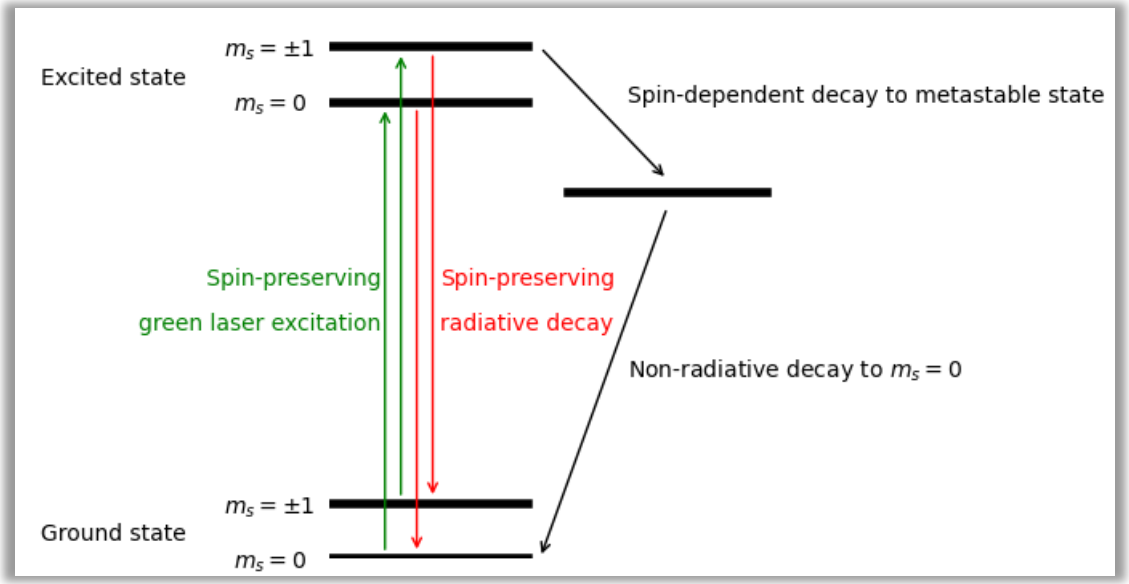
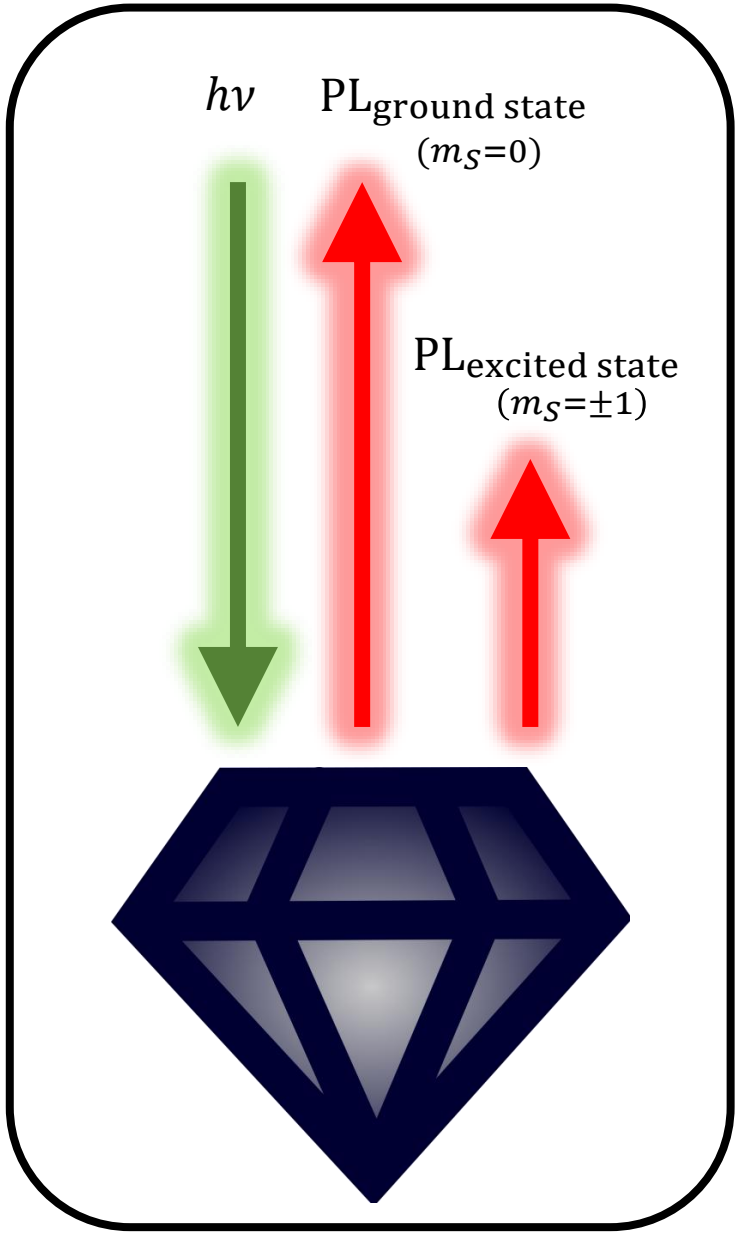
Green laser illumination continuously polarize the electron spins to the sublevel $|m_s=0\rangle$, which enables optical initialization of the spin state.

The intensity of the PL is lower for the $|m_s=\pm 1\rangle$ states due to a spin-selective, non-radiative decay channel.

Quantum sensing with color centers





Optically Detected Magnetic Resonance (ODMR)

We can drive the NV between $|m_s = 0\rangle$ and $|m_s = \pm 1\rangle$ with microwave pulses!
